Has your school received their 40 tablets from the GDE?

Gauteng schools recently benefitted from receiving 40 tablets that were supplied by the GDE as part of its e-Learning rollout. Many schools want to make immediate use of these tablets but do not yet have a Wi-Fi solution let alone an e-learning platform.

These tablets afford the schools a +R120k head-start into e-Learning, however school budgets are under increasing pressure and difficult to balance, let alone able to accommodate the additional costs of a complete e-Learning implementation. Cheap Wi-Fi deployments however, need to be avoided as these only waste valuable funds.

Introducing
The Education Station

UC-Wireless now offers schools a portable/starter Wi-Fi solution that is upgradable as budget becomes available, without compromising on the quality of the first critical step to e-Learning. With in-depth knowledge, skill and expertise and a true understanding of the "business/commercial dynamics" of schools, plus numerous reference sites, we provide an assurance to schools and educational institutions that we only deploy credible, viable solutions that are guaranteed to work and that will impact positively on a school's e-Learning experience.

The "portable" offering includes a basic controller and 1 - 6 dual band Access Points (AP's), allowing schools to literally take their "First Critical Step to E-Learning" while at the same time accommodating immediately available budget.

CHOOSE FROM
- Ruckus Controller Plus 1 - 6 AP's OR;
- A Single AP for a Hotspot

Deployment using Ruckus's Wireless Smart Mesh means that a single AP can create a true wireless network for initial e-Learning without having to run cables!

All options can accommodate 90 -100 learners per AP, PLUS a digital library / gateway portal and a 3G internet solution "add-on" if required. See more details at *uc-wireless.com/education-station*

Considering e-Learning ?
Smart Wi-Fi
The first critical step to any e-Learning solution

- Enterprise-Grade High Density Wi-Fi
- 100% reliable for multiple concurrent connections
- Tried and tested for education globally
- B.Y.O.D. fully supported and compatible with any e-Learning solution
- Professional, prompt and efficient installation
- Support & training provided for simple, seamless configuration
